

12 October 2007

The Manager,
Company Announcement Office,
Australian Stock Exchange Limited

SIGNIFICANT RESULTS FROM THE CITRONEN ZINC PROJECT

Ironbark is pleased to report that it has received all the assay results from a comprehensive sampling programme at the wholly owned Citronen zinc project (Citronen) in Greenland.

NEW ZONES OF HIGH GRADE MINERALISATION IDENTIFIED INCLUDE:

Beach Zone

CF95-85: **6m at 7.8% zinc (Zn) and 0.8% lead (Pb)** from 108m, including **3m at 12.6% zinc, 1.3% lead**

This is in addition to the historic result of 6.3m at 6.5% zinc, 0.5% lead from 85.15m

Discovery Zone

CF96-93: **5m at 7.2% zinc** from 82m, including **2m at 12.1% zinc**

This is in addition to the historic result of 16.6m at 10.6% zinc from 18.2m

To meet the statutory Australian Stock Exchange reporting requirements and as a result of the historical legacy of previous results being reported only on the Toronto Stock Exchange, Ironbark provides the historic and recent diamond drill hole assay results greater than 2% Zn. This will allow the results from this significant work programme to be evaluated in context – see Appendix 1.

POSITIVE QUALITY CONTROL AND ASSAY CROSS CHECKING

To facilitate a modern JORC (2004) and National Instrument 43-101 level of resource estimation, several known intervals of historic drilling were submitted for re-evaluation. The results of this check assay work have returned an excellent level of repeatability with a correlation coefficient of 0.99 (99%). This confirms the validity of the 1990's assay and sampling techniques.

What has Ironbark done?

The Citronen project was discovered in 1993 and explored until 1998 over a period of low and falling base metal prices. As a consequence Platinova A/S, the Project owners during this period, targeted only high grade mineralisation and calculated a resource based on limited sampling. Funding for base metal projects during this period was very difficult to obtain and eventually Platinova A/S was forced into administration. Ironbark has been able to reassess the true extent of the base metal mineralisation with the aid of an on-site instant assaying tool (Innov-X hand held X-ray fluorescence). Over 2,700 mineralised diamond core intercepts were identified, cut on site and then flown by C130 Hercules aircraft to ALS Chemex in Vancouver for assay.

The results of the reappraisal have shown that the extent of mineralisation is larger than the previously assayed intervals. The wider intercepts have improved the understanding and continuity of the mineralised horizons which will improve the overall confidence in the resource. An example of a cross section showing the historic mineralisation and the new assay results is shown in figure 1.

What does this mean for Citronen?

Work has commenced towards a generating a revised resource estimate utilising the new information which will be released to the market as soon as possible and is expected to be significantly larger than the existing resource estimate.

The Canadian based, global engineering and geological consulting firm, Wardrop Engineering Inc (Wardrop) has provided start up geological input to Ironbark. Greg Mosher, who heads Wardrops involvement, is a highly experienced geologist who was involved in the exploration, discovery, interpretation and documentation of Citronen from 1993 to 1995 inclusive. His input and knowledge has assisted Ironbark's exploration ramp up. Wardrop and Ironbark will jointly work towards the evaluation and preparation of a modern and quotable resource estimate. The resource estimate will be a step towards commencing work on feasibility evaluation of Citronen to deliver a large scale mining operation.

Importantly, mineralisation remains open in every direction leaving exceptional scope for further resource upgrades and discoveries.

About Ironbark

Ironbark is a focused and well funded base metal exploration and development Company listed on the Australian Stock Exchange. The Company has a technically strong Board with significant relevant experience and owns a suite of base and precious metal projects in Australia and Greenland hosting in excess of 3 billion pounds of contained zinc.

The flagship project is the wholly owned Citronen zinc project in Greenland. Citronen currently hosts 16.8Mt at 7.8% zinc and 0.9% lead – see figure 2.

Ironbark considers that Citronen offers:

- Large scale
- Long life
- Low cost
- Low risk
- Exceptional exploration potential

Ironbark has secured more than 1,700sq km of exploration ground surrounding Citronen, offering unfettered access to further exploration success.

Ironbark owns several other prospective base metal and gold projects, which it plans to progressively pursue.

For further information please contact:

Jonathan Downes – Managing Director

The information in this report that relates to Exploration Results, Mineral Resources or Ore Reserves is based on information compiled by Mr A Byass, B.Sc Hons(Geol), B.Econ, FSEG, MAIG an employee of Ironbark Gold Limited. Mr Byass has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Byass consents to the inclusion in the report of the matters based on this information in the form and context in which it appears.

CITRONEN FJORD DRILL HOLE ASSAYS (>2% Zn)

NB# Depths are in metres downhole. Results published by Platinova A/S from drilling conducted between 1993 and 1997 for Zn and Pb were obtained from half diamond drill core, using four-acid-digest and aqua-regia process and assayed using Atomic Absorption Spectroscopy (AAS) techniques at Bondar Clegg (Ottawa), Chemex Labs Ltd (Vancouver) and Cominco Ltd Laboratory (Rexdale) in Canada. Ironbark sample prep and assaying was done by ALS Chemix in Vancouver, BC, Canada, using a four-acid-digest and an AAS technique. Ironbark also sent Certified Laboratory standards (for Pb and Zn) for quality control. These assays returned results within acceptable limits.
