CAPTAINS FLAT JOINT VENTURE EXPLORATION UPDATE

Ironbark Zinc Limited (Ironbark) is pleased to announce that Ironbark's joint venture partner, NSW Base Metals Pty Ltd (a subsidiary of Glencore International AG) and Forge Resources Limited in regards to the Captains Flat Project, have completed a diamond drillhole at the Jerangle Prospect. The location of the hole was positioned based on historic drilling results and recent soil sampling.

The drill hole reached a depth of 450.2m. Preliminary visual inspection notes substantial zones of sulphide mineralisation. The drill core has been transported to Cobar and laboratory results will be reported when they become available.

Ironbark and NSWBM have become entitled to a 51% Joint Venture Interest on an equal basis and are currently jointly funding \$600,000 in further exploration to earn an additional 24% Joint Venture Interest.

ABOUT THE CAPTAINS FLAT BASE METAL PROJECT

The Captains Flat Base Metal Project is located south of Canberra in New South Wales. The Project covers a strike length of 39 kilometres of a highly endowed Volcanic Massive Sulphide (VMS) horizon that hosts numerous historic mineral occurrences and mines, including the Lake George Mine that produced 4 million tonnes of high-grade ore until closure in 1962 (see Figure 1) and was at one time Australia's second largest producer of copper.

Within the project area prospects include the Jerangle, Lake George and Vanderbilt Hill prospects where previous explorers have returned high grade copper and zinc drill intercepts.

- **Jerangle**

The Jerangle Prospect is located at the southern end of the project area and drilling over a strike length of 1.5 kilometres has returned drill intercepts assaying up to 5.25% copper. High density soil sampling has delineated high priority exploration targets for immediate follow up.

- **Lake George Mine**

The high-grade Lake George Mine produced approximately 4Mt of ore at 10% zinc, 6% lead, 0.7% copper, 1.8 g/t gold and 55 g/t silver and remains prospective for remnant ore at current base metal prices as well as at depth where results such as 1.22m @ 12.4% zinc, 5.4% lead were returned beneath historical workings over a strike length of at least 300 metres from diamond drilling. Mineralisation is open at depth and may represent possible repeats of the historically mined areas.

- **Lake George Tailings**

Ironbark drilled 154 air core drill holes for 2,533 metres of drilling on the Lake George Mine tailings at the Captains Flat Project in New South Wales. The program tested the mineral content of the historic tailings dumps.

- **Vanderbilt Hill**

The Vanderbilt Hill prospect is located to the east of the Lake George Mine and drilling has returned results such as 3.9m @ 10% zinc, 5.3% lead. The prospect is considered to be highly prospective with open ended historic high grade drill results yet to be followed up.

Figure 1: Tenement plan of Captains Flat project tenure showing major prospect locations and significant drilling/mining results.

ABOUT IRONBARK

Ironbark is a well-funded Company listed on the Australian Securities Exchange (ASX: IBG) and focused on the development of a major base metal mining operation in Greenland.

Ironbark seeks to build shareholder value through exploration and development of its projects and also seeks to actively expand the project base controlled by Ironbark. The management and board of Ironbark have extensive technical and corporate experience in the minerals sector.

Citronen currently hosts in excess of 11 Billion pounds of zinc (Zn) and lead (Pb). The current JORC compliant resource for Citronen:

59.9 million tonnes at 5.9% zinc (Zn) + lead (Pb)

| Resource Category | Mt | Zn % | Pb % | Zn+Pb% |
|-------------------|-------------|------------|------------|------------|
| Measured | 15.0 | 5.8 | 0.5 | 6.3 |
| Indicated | 19.3 | 5.1 | 0.6 | 5.7 |
| Inferred | 25.5 | 5.3 | 0.5 | 5.8 |
| Total | 59.9 | 5.3 | 0.5 | 5.9 |

Using inverse distance squared (ID²) interpolation and reported at a 3.0% Zn cut-off

within a larger global resource of:

| Resource Category | Mt | Zn % | Pb % | Zn+Pb% |
|-------------------|--------------|------------|------------|------------|
| Measured | 33.2 | 3.8 | 0.5 | 4.2 |
| Indicated | 52.2 | 3.7 | 0.5 | 4.2 |
| Inferred | 47.2 | 3.3 | 0.4 | 3.7 |
| Total | 132.6 | 3.6 | 0.5 | 4.0 |

Using Ordinary Kriging interpolation and reported at a 2% Zn cut-off
